STATEMENT OF SIGNIFICANCE

The building which houses Engine Company No. Thirty-three was designed by the noted architect Ernest Flagg in collaboration with his junior partner, Walter B. Chambers. Both men received architectural training at the Ecole des Beaux Arts in Paris. Flagg is well known as the designer of one of Manhattan's first skyscrapers, the Singer Building, and the Corcoran gallery in Washington, D.C.

A monumental arch trimmed with stone, providing a great deal of window area at the second, third and fourth floors, is the main feature of the facade. The arch is set above the rusticated stone base of the building, which is pierced by two large vehicular entrances flanked by a smaller door and a window. Above the stone base, brick laid in English bond constitutes the primary wall fabric. The deep arch reveal contains an elaborately carved cartouche which is set into it at the top and extends outward to distinguish the keystone. Handsome decorative metalwork is featured at the second floor windows, while a pediment defines an aedicular feature at the third floor.

Eminent architectrally as one of the few surviving Ernest Flagg buildings, this fire house is also a part of a venerable tradition. Organized firefighting was introduced on Manhattan in 1648 with a fire ordinance adopted during the Dutch settlement under the administration of Governor Stuyvesant. For the first two centuries the brigades were composed of volunteers, but in 1865, the first paid company went into service. This building, for Fire Engine No. 33, is an appropriate tribute to a profession so bold and so hazardous as that of firefighting.
