View from my window.

It looks to be 20' high, + adding 2,000 sq.ft.
to a single-family home of 8,000 sq.ft.

It blocks air and light to a six-storey building

This is an historic building (1919-1920;
John Lennon's practice studio; stables;
Wesley Snipes and friends) and the
historic integrity of the building, block, and
neighborhood should not be disturbed.

P.S. Late Friday afternoon, after all of us had a chance to view the project, and take pictures, more height was added (yellow tape). Perhaps they felt they had left too much light and air for the rest of us. Perhaps they are now planning two stories.

Would anyone be surprised, if this project were approved, if they then applied for a re-zoning from single-family to condominium?
